

Job Title: Developer with Columba IDF

Job Role:

The role will see the candidate work as part of the Development team, working on current product support and product forward development. Technologies involved are primarily Java Enterprise Edition, Database development, with others as required.

A good understanding of OO technologies, concepts and design is a must along with demonstrable ability to write clear and coherent code, as well as an understanding of design patterns. Experience with Agile development methodologies would be an advantage.

Personal Specification:

Candidates should preferably possess a relevant third level qualification; however relevant industry experience, training and certifications will be considered.

A successful candidate will work on a small but growing development team and will therefore be required to demonstrate excellent interpersonal skills along with an ability to share knowledge and expertise and a willingness to work in a flexible, changing team environment.

Apart from communication skills and teamwork, a candidate will require good problem solving and time management skills. They should also be enthusiastic and ambitious about working in a dynamic and vibrant growing company.

Technical Specification

Required expertise in at least 2 of the following Technologies:

- Java EE: EJB3, JSP, JSF, Servlets
- HTML, Javascript, AJAX
- XML processing, XSL
- JPA: use of an implementation framework e.g. Hibernate, Toplink
- SOA / Web Services
- Databases and SQL

Desirable expertise or knowledge of some the following Technologies:

- Application Servers (development platform is JBoss)
- IDE (e.g. Eclipse, IntelliJ, NetBeans)
- ICEFaces / RichFaces / JBoss Seam
- Testing (Unit testing, automated build and test environment)
